DETAILED ACTION

Election/Restrictions

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-45, drawn to a leadframe for use in an integrated circuit package, classified in class 257, subclass 666.
 - II. Claim 46, drawn to method of manufacturing a leadframe for an integrated circuit, classified in class 438, subclass 123.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions Group II and Group I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of Group I would not necessary imply unpatentability of the process of Group II, since the device of Group I could be made by processes different from those of Group II, for example, the step of moving portion of the support member in a pure vertical direction such that the die paddle lies in a lower horizontal plane and be replaced with a different conventional process that is known and used by one skill in the art.
3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
